KIARASH AKBARI

AI SOFTWARE ENGINEER — BACKEND & AI-INTEGRATED SYSTEMS

Mashhad, Iran // +98 922 233 0780 // Kiarash.Akbari.Contact@gmail.com
github.com/KiarashAkbari // kiarashakbari.github.io/PERSONAL-WEBSITE

01 PROFESSIONAL SUMMARY

AI Software Engineer focused on backend systems and AI-integrated applications. Shipped a production product platform end-to-end, contributed backend and RAG engineering to a hybrid graph/vector AI system for BIM data, and built a full ML pipeline for network anomaly detection. Applied ML research through the Dotin Financial Technologies Laboratory at Ferdowsi University of Mashhad. Open to remote AI Software Engineering roles.

02 CORE SKILLS

– Languages — Python, JavaScript, HTML, CSS
– Backend & Systems — FastAPI, Neo4j/Cypher, ChromaDB, REST APIs, Docker, Git/GitHub, GitHub Actions (CI/CD)
– AI & Machine Learning — RAG pipelines (retrieval, orchestration, grounded citations), neural networks, autoencoders, Scikit-learn, TensorFlow, Keras, NumPy
– Automation & Data — Playwright, BeautifulSoup, Folium

03 PROFESSIONAL EXPERIENCE

FULL-STACK DEVELOPER & PROJECT OWNER — VINO (Smart Home Product Platform)

Remote / 06.2026 – Present

– Architected a multi-page product catalog end-to-end with data-driven product logic (dynamic dropdown, data-driven rendering).
– Owned delivery independently: Git feature-branch/PR workflow, client revisions, and invoicing under real timelines.

SOFTWARE ENGINEERING ASSOCIATE — TELUS (Canada)

Remote / 01.2025 – 12.2025

– Collaborated with distributed engineering teams on enterprise software tasks, applying Git-based version control and backend best practices in production.

AI & DATA SCIENCE RESEARCHER — Dotin Financial Technologies Lab, Ferdowsi University of Mashhad

Mashhad / 2025 – Present

– Engage with data-driven, AI-oriented fintech research at the lab established through Dotin (FANAP Group), a core-banking software provider for major Iranian banks and insurers.

04 TECHNICAL PROJECTS

BIM-INTELLECT-V2 (Private Team Project) — Python, FastAPI, Neo4j, ChromaDB, RAG, Docker

– Contributed backend and RAG-correctness engineering to a hybrid graph/vector AI system for BIM regulatory Q&A.
– Built FastAPI endpoints, Neo4j/ChromaDB health checks, and dynamic Cypher filtering; fixed RAG citation-grounding bugs and optimized the IFC parsing/graph-extraction pipeline.
– Codebase available on request (private repository).

NETWORK INTRUSION DETECTION SYSTEM (NIDS) — Python, TensorFlow/Keras, Streamlit

– Built a full ML pipeline for zero-day DDoS detection: flow-based feature engineering, autoencoder training, and a deployed Streamlit interface.
– Source — github.com/KiarashAkbari/NIDS-Forensic-Tool

CLONE-1 — Python, Playwright, PyQt6, SQLite

– Built a web archiving and mirroring tool with stealth-mode scraping, deep asset extraction, and a custom desktop GUI.
– Source — github.com/KiarashAkbari/CLONE-1

05 EDUCATION & CERTIFICATIONS

B.SC. COMPUTER ENGINEERING — Eqbal University

– Python and Machine Learning (Jadi Mirmirani) // 100 Days of Code (Angela Yu)
– Modern JavaScript (Brad Traversy) // Cybersecurity (Cybrary)
